We also have a full range of
**Evacuation Chair Signage &
Anti-Theft Alarm**

The EvacuLife Pro is an evacuation chair designed to transport seated patients over stairs, all types of surfaces, and low obstacles like gutters, curbs, and protruding doorframes.

The EvacuLife Pro conserves time and energy while improving both patient care and operator safety. With its belted track system, the EvacuLife allows operators to take advantage of a smooth gilding motion instead of having to lift or carry the chair up and down stairs, which can be challenging and uncomfortable for patients being transported.

The chair comes equipped with two 15-cm rear wheels, two 10-cm front swivel wheels and 2.5 cm track-to-ground clearance. These traits were all added to make the chair easy to manoeuvre over all types of surfaces, including those that are uneven or difficult to tread and confined areas with limited mobility.

Because of the EvacuLife Pro's metal frame construction, it is one of the most durable evacuation chairs available. The large seating surface for patients and plastic snap-on seat, panels and footrest provide both comfort and safety for patients. When combined with the lower track angle, this large seat helps patients feel calm and in-control throughout the duration of their transportation in the EvacuLife Pro.

Operators will be pleased with the lift bar positions, which helps improve control while making the chair easier to move. The EvacuLife Pro is the perfect evacuation chair for those looking to reduce strain on both operators and patients being transported.

Key Features

- Belted track system for gliding down stairs
- Moulded ABS seat and back panels
- Smooth 75mm front swivel wheels and extra tall 125mm rear
- 2.5 cm clearance between ground and track
- opened track allows easy manoeuvrability
- Folding footrest
- Safe working load 250 KG
