

Med Sled

Evacuation Sleds are a device that can easily evacuate a non-ambulatory person down multiple flights of stairs quickly and safely. They allow staff to transport patients 2 – 3 times their own weight with no lifting, as they use a roll and drag method of movement. The sleds have a specially designed stairwell braking system, which allows for safe and controlled descent and can accommodate IV bags, oxygen and other small devices.

Standard

The Med Sled Evacuation Sled is simple and easy to deploy. The standard 90cm sled is designed for average size evacuees and allows anyone to transport evacuees up to 3 times their own weight.

Size rolled	23cm X 92cm
Size open	92cm x 220cm
Weight	4.5kg
Maximum load	450kg

Bariatric

The Bariatric 120cm Sled is 30cm wider than our standard 90cm sled to accommodate larger girth evacuees up to 450kg.

Size rolled	120cm X 25cm
Size open	120cm x 220cm
Weight	5.5kg
Maximum load	450kg

Youth

Shorter, more narrow sled designed for individuals under 160cm, comes 100% assembled and ready to go for both horizontal and vertical evacuation.

Size rolled	71cm X 25cm
Size open	71cm x 165cm
Weight	3.2kg
Maximum load	450kg

Infant Insert

Med Sled Infant Insert provides a safe and comfortable method for evacuating your most delicate patients. The insert can hold up to 3 Infants. The Insert fits inside an MS36 Med Sled® for transportation. This device eliminates the need to carry the child.

Toddler Insert

Med Sled Toddler Insert provides a safe and comfortable method for evacuating your most delicate patients. It fits into the MS36 sled and accommodates two toddlers and equipment. This insert is built with two adjustable three point harnesses for securing the toddler in place.

When timing is everything, you need to be **DISASTER PREPARED – EVACUATION READY**. Our Med Sled Evacuation Products enable a safe and secure way to evacuate your patients, staff and guests with disability or injury.

The beauty of the Med Sled is that it uses the 'roll and drag' method, which ensures heavy lifting is not required. The infant and toddler inserts fit perfectly into the Med Sled, allowing evacuation of toddlers and infants as easy as adult evacuation.

Key Benefits

- Simple and easy to use
- Comes 100% Assembled and ready to go for both horizontal and vertical evacuation
- Patented Perimeter Tether and Stairwell Braking System allows for safe and controlled descent
- Provides stabilization
- Provides backboard like qualities
- No Lift device – Allows your staff to evacuate a person 2 to 3 times their weight
