

Deafgard

In the event of fire, deaf or hard of hearing people will not be able to hear the fire alarm. Deafgard provides a wire free solution for communicating the sounding of a fire alarm to deaf and hard of hearing people when they are asleep.

Benefits

- Portable device, requiring no installation
- Ensures you comply with elements of the Equality Act 2010
- Independence for the user
- Peace of mind for friends and family
- Alarm clock facility
- Ideal for hotels, care homes and rooming houses

Deafgard

Deafgard is a battery powered unit with a pad attachment that goes under the pillow. When the fire alarm sounds, the pillow pad vibrates, LED lights flash and the LCD screen displays 'fire'.

“ For someone who is deaf or hard of hearing, a stranger coming into your hotel room to alert you of an emergency could be distressing. Thankfully we found Deafgard. Our guests can take the device to their room as it is easily portable, and they can relax knowing they will be alerted automatically in the event of a fire.”

Ben Hewitt – Hotel Manager

“ Our residents love Deafgard. It gives them independence and peace of mind knowing the device will make them aware if there is a fire, without being disturbed in their room. ”

Ella Jarvis - Care Home owner
