## Emergency Escape Rope Ladder

### Introduction

If you live or work in a multistorey building, if a fire or other emergency situation occurs you need more than one option to get down to the lower floor and safely evacuate. Lifts are often out of action, and should not be used during a fire, and if the stairs are blocked due to the emergency, it pays to have a backup plan.

### Emergency Escape Rope Ladder 4.0M & 7.0M

Strong and durable, the Emergency Escape Rope Ladder is an essential safety item for two & three storey homes and work places. It's simple to use and set up, and when it's needed it can be deployed quickly. In an emergency, lifts and stairs are often no longer accessible, and the ladder provides occupants with a safe way to escape.

The rungs are made from Non-Slip Epoxy Polyester and fixed to FRP Nylon ropes, the Emergency Escape Rope Ladder has a load capacity of 150kg. It can also be folded down to a small size, which means it's easy and convenient to store away when not in use.

If you live or work in a multi-storey building, the Emergency Escape Rope Ladder provides peace of mind that you can get out safely, and it's an important addition to your home or workplace emergency toolkit.

### Features:

- Easy to use and set up, with an adjustable hanger
- Fast deployment which is vital in an emergency
- Strong and durable with a load capacity of 150kg
- Folds or rolls up for easy and convenient storage when not in use.
