Carry Evacuation Chair

Evacuation Chair Accessories

Signage, Comfy Seat
and Butterfly Slide Transfer Board

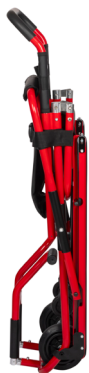

For Descent and Ascent use – 160kg capacity

The **EvacuLife Carry Evacuation Chair** provides a dependable evacuation pathway when lifts are unavailable and time is critical. In a fire, earthquake, flooding event or security incident, the chair enables efficient, controlled and safe evacuation for people who cannot use stairs independently thanks to its unique friction-controlled belted track system.

Additional foldable carry handles enable the device to be used effectively for transporting individuals up stairs when required. The fold-out rear wheels are fitted with brakes that are conveniently positioned for operator access, enhancing safety and control during use. The headrest incorporates operating instructions and an integrated support strap, providing additional head and neck support when required.

The evacuation chair has been designed for use in multi-storey buildings to assist people with disability, including people with mobility impairment, respiratory conditions, cardiac conditions, arthritis, pregnancy or temporary injuries.

It assists organisations in meeting their occupational health and safety responsibilities under the **Disability Discrimination Act (DDA)** and applicable **OH&S Workplace Legislation**.

Features

- Evacuate individuals up or down stairs
- Used by one (descent) or two operators (ascent)
- Adjustable, easy-grip and lightweight alloy aluminium frame
- Four-wheel movability
- Compact profile for easy storage
- Adjustable head restraint with operator instruction
