Escape Evacuation Chair

Evacuation Chair

Evacuation Chair Accessories

Signage, Comfy Seat
and Butterfly Slide Transfer Board

For Descent only – 160kg capacity

The **EvacuLife Escape Evacuation Chair** provides a dependable evacuation pathway when lifts are unavailable and time is critical. In a fire, earthquake, flooding event or security incident, the chair enables efficient, controlled and safe evacuation for people who cannot use stairs independently, thanks to its unique friction-controlled belted track system.

The fold-out rear wheels are fitted with brakes that are conveniently positioned for easy operator access, enhancing safety and control during use. The headrest incorporates operating instructions and an integrated support strap, providing additional head and neck support when required.

The evacuation chair has been designed for use in multi-storey buildings to assist people with disability, including people with mobility impairment, respiratory conditions, cardiac conditions, arthritis, pregnancy or temporary injuries.

It assists organisations in meeting their occupational health and safety responsibilities under the Disability Discrimination Act (DDA) and applicable OH&S Workplace Legislation.

Features

The EvacuLife Escape II is the total solution for any emergency evacuation situation and has the following features:

- Adjustable, easy-grip and lightweight alloy aluminium frame
- Four-wheel movability
- Compact profile for easy storage
- Easy evacuee transfer on and off
- Adjustable head restraint with operator instruction
